//EDWIN'S PERSPECTIVE:

Less than a year ago, our Chamber went through a deep process of getting our gears in order. With that, we invited leaders from other industries to join us. They were implemented into the Chamber's core thus becoming new board members. This led to last January's Laurel Night when our executive officers and board of directors were officially installed. That was the beginning for 2020's consistent blueprint plan of social events and functions. We followed Laurel Night a month after with a new live interview & networking event called, Up Close With ... and that February event featured actor/director Mark Dacascos. Going forward, we set in motion more Up Close With ... live events as well as the 7th Filipino Hollywood Actors Panel for June. But, despite our early February, 2020 post on our official Facebook page of a Bloomberg article about U.S. travelers being banned to fly to China due to a flu outbreak, an unfortunate new era soon began here at home.

Governor Gavin Newsom has launched a new coronavirus website that includes ways to stay healthy and resources available to Californians impacted by

the outbreak, including how to apply for unemployment benefits, disability benefits and paid family leave. The website also serves as a central location for up-to-date and simple guidance, and is part of a broader public awareness campaign to provide information to further prevent the spread of the virus. Access the website here: <https://covid19.ca.gov/>

This will end, but it won't end nearly as soon as we all would like. Until a vaccine is made foolproof and/or the eradication of the disease itself, we are in it for the long haul indefinitely. In the meantime, we of the

Filipino American Chamber of Commerce of Hollywood will continue to provide events remotely online due to the current shutdown that placed non-profit organizations such as the Chamber to not congregate more than ten people as ordered by both California Governor Newsom and Los Angeles City Mayor Eric Garcetti.

You can also count on ABE Magazine every month with the latest in entertainment and information. There is a new section called, "COVID-19: News You Should Know" and three short articles about the Coronavirus, Self-Quarantine and Social Distance.

And, with news of, and related to COVID-19 that changes every minute of every day, please refer to the real experts at the Los Angeles County Public Health Department, the Centers for Disease Control and Prevention, World Health Organization, the CA. Governor's Office, the L.A. Mayor's Office and the

aforementioned website - <https://covid19.ca.gov/> - for continuing updates.

Stay safe. Stay calm. Stay well. Stay home. ★

WHAT IS COVID-19?

Coronavirus disease 2019 (COVID-19) is a respiratory illness that can spread from person to person. The virus that causes COVID-19 is a novel coronavirus that was first identified during an investigation into an outbreak in Wuhan, China.

The disease spreads from person to person. Risk of infection with COVID-19 is higher for people who are close contacts of someone known to have COVID-19, for example healthcare workers, or household

members. Other people at higher risk for infection are those who live in or have recently been in an area with ongoing spread of COVID-19.

The virus that causes COVID-19 probably emerged from an animal source, but is now spreading from person to person. The virus is thought to spread mainly between people who are in close contact with one another (within about six feet) through respiratory droplets produced when an infected person coughs or sneezes. It also may be

possible that a person can get COVID-19 by touching a surface or object that has the virus on it and then touching their own mouth, nose, or possibly their eyes, but this is not thought to be the main way the virus spreads.

Patients with COVID-19 have had mild to severe

respiratory illness with symptoms of fever, cough and/or shortness of breath. The severe complications from this virus was found in some patients to have pneumonia in both lungs, multi-organ failure and in some cases, death.

People can help protect themselves from respiratory illness with everyday preventive actions such as avoid close contact with people who are sick, avoid touching your eyes, nose, and mouth with unwashed hands, wash your hands

often with soap and water for at least twenty seconds and use an alcohol-based hand sanitizer that contains at least 60% alcohol if soap and water are not available.

In order to keep from spreading respiratory illness, if you are sick, you should stay home, cover your cough or sneeze with a tissue, then throw the tissue in the trash and clean and disinfect frequently touched objects and surfaces.

If you have traveled from an affected

area, there may be restrictions on your movements for up to two weeks. If you develop symptoms during that period (fever, cough, trouble breathing), seek medical advice. Call the office of your healthcare provider or your doctor before you go, and tell them about your travel and your symptoms. They will give you instructions on how to get care without exposing other people to your illness. While sick, avoid contact with people, don't go out and delay any travel to reduce the possibility of

spreading illness to others.

There is currently no vaccine to protect against COVID-19. The best way to prevent infection is to take everyday preventive actions, like avoiding close contact with people who are sick and washing your hands often.

There is no specific antiviral treatment for COVID-19. People with COVID-19 can seek medical care to help relieve symptoms. ★

WHAT IS SOCIAL DISTANCE?

Social distance is the act of keeping at least six feet of space between you and other people to stop or slow down the spread of contagious disease.

limiting groups of ten people or more coming together

limiting nonessential travel

working from home

closing buildings

canceling events and social gatherings

suspending in-person classes and going to web-based learning

modifying business operations to allowing people to come in only to pick up products that have been reserved or requested on-line or by telephone

The minimization of contact with other people will slow the spread of the disease and provide our community with the valuable time needed to be better prepared. Remember: these measures are important to follow, even if you are not exhibiting symptoms.

WHAT IS SELF-QUARANTINE?

People who have been exposed to the new coronavirus and who are at risk for coming down with COVID-19 might practice self-quarantine.

Health experts recommend that self-quarantine lasts fourteen days, enough time to find out whether or not they will become ill and be contagious to other people.

You might be asked to practice self-quarantine if you have recently returned from traveling to a part of the country or the world where COVID-19 is spreading rapidly, or if you have knowingly been exposed to an infected person. Self-quarantine involves:

Using standard hygiene

Soap and wash your hands frequently (length: 20 seconds)

Not sharing things like towels and utensils

Staying at home

Not having visitors

Staying at least six feet away from other people in your household

Once your quarantine period has ended, if you do not have symptoms, follow your doctor's instructions on how to return to your normal routine.
